

modern water treatment structures and craft system design and calculating (Chinese Edition)

This book includes the following contents: water supply engineering survey and design, coagulation, precipitation, floating, clarification, filter, micro pollution source water treatment, disinfection, water treatment system and water plant design. According to the process flow of water treatment, this book elaborates on treatment principle, calculation method of the various types of structures, and lists a large number of examples and project cases, matched with engineering design drawings. According to development of the water treatment process, in addition to the traditional water treatment structures, the book also discusses the recent design and calculation of the new structures, such as homogeneous filter material ponds, shutter filter. As for the micropolluted source water treatment, this book elaborates on the design calculation of biological oxidation treatment structures, chemical oxidation technology and activated carbon filter and lists project examples of micropolluted source water treatment.
